

Skills Worksheet

Vocabulary and Section Summary

Cell Energy

VOCABULARY

In your own words, write a definition of the following terms in the space provided.

1. photosynthesis

2. cellular respiration

3. fermentation

SECTION SUMMARY

Read the following section summary.

- Most of the energy that fuels life processes comes from the sun.
- The sun's energy is converted into food by the process of photosynthesis.
- Cellular respiration breaks down glucose into water, carbon dioxide, and energy.
- Fermentation is a way that cells get energy from their food without using oxygen.
